Wireless

Accessing eduroam Wireless from Macs

(Revision Date: 7/28/2016)

Introduction

eduroam (education roaming) is a secure, worldwide roaming wireless access service developed for, and used by, the international research and education community.

You will need a wireless device which supports WPA2 in order to connect to this network, and you will have to configure a wireless connection (see details below for platform specific information) before you can connect. Once configured, most clients will be able to reconnect automatically rather than having to re-enter your credentials.

Connecting to eduroam Wireless network

Step 1 - Click on the wireless icon in top menu to access wireless settings:

Step 2 – From the list of available wireless networks, select 'eduroam':

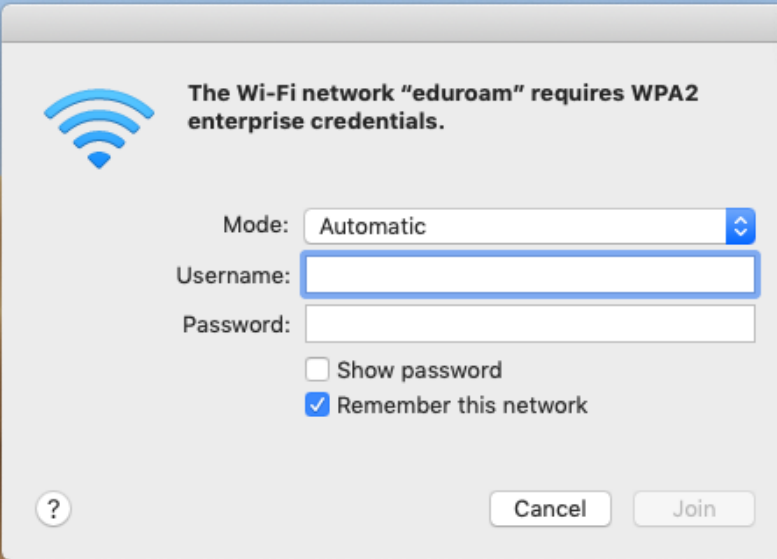

Step 3 – You will be prompted to enter your login credentials. Insert your information, then click ‘OK’:

- For Community College and BOR System Office users, login with your [NetID](#) and password:

Username: 01234567@commnet.edu

Password: Your password

The screenshot shows a macOS-style dialog box for connecting to a Wi-Fi network. The title bar is light gray. On the left is a blue Wi-Fi signal icon. To its right, the text reads: "The Wi-Fi network "eduroam" requires WPA2 enterprise credentials." Below this, there are three input fields: "Mode:" with a dropdown menu showing "Automatic", "Username:" with an empty text box, and "Password:" with an empty text box. Below the password field are two checkboxes: "Show password" (unchecked) and "Remember this network" (checked). At the bottom left is a help icon (a question mark in a circle). At the bottom right are two buttons: "Cancel" and "Join".

Finished!

When you return to a CSCU-affiliated location, it is recommended that you reconnect to the ConnSCU SSID.

Contacting Support

If you have any issues or questions, please contact your [local IT department](#).
