1. Introduction

eduroam (education roaming) is a secure, worldwide roaming wireless access service developed for, and used by, the international research and education community.

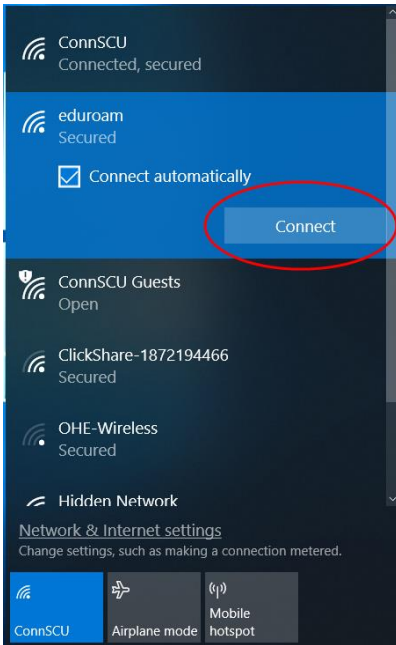

You will need a wireless device which supports WPA2 in order to connect to this network, and you will have to configure a wireless connection (see details below for platform specific information) before you can connect. Once configured, most clients will be able to reconnect automatically rather than having to re-enter your credentials.

2. Connecting to the eduroam Wireless Network

Step 1 – View available wireless network connections using the wireless utility. Click on the wireless icon in system tray:

Step 2 - From the list of available wireless networks, select 'eduroam' and click 'Connect':

Step 3 – If you are already logged into Windows, and you used ConnSCU credentials (NetID and password), you will not be prompted to login again and your wireless connection is complete at this point.

- If you are not logged into the workstation using ConnSCU credentials (e.g. you are using a personal laptop), you will be prompted to enter your login credentials. Enter your credentials then click 'OK':
- For Community College and BOR System Office users, login with your [NetID](#) and password.

Finished!

***NOTE:** When you return to a CSCU-affiliated location, we recommend that you reconnect to the ConnSCU Wireless network.

3. Contacting Support

If you have any issues or questions, please contact your [local IT department](#)
